

**1. Q: What hiccups might occur if I set the BCLK over 102MHz on Intel's Skylake platform?**

- A:**
1. Some functions will be disabled such as Intel iGPU, CPU Turbo Ratio, AVX and C-state etc.
  2. Intel iGPU will be disabled, so please use a discrete VGA card.
  3. The CPU temperature may not be read on a few models such as Z170M Pro4S, Z170M-ITX/ac, Z170M Pro4 and Z170M Extreme4.
  4. There are certain risks involved with tuning the BCLK. And the results may vary between different configurations.
