## What is EuP?

EuP, stands for Energy Using Product, was a provision regulated by European Union to define the power consumption for the completed system. With the great quantity and the popularly using of the electrical products nowadays and the continuously increasing of the electrical products categories in the following 20 to 30 years, European Union decided to establish an effective strategy to solve the energy consumption problem. That is, according to EuP, the total AC power of the completed system shall be under 1.00W in off mode condition.

## How to setup an EuP system?

To meet EuP standard, the EuP ready motherboard and the EuP ready power supply are required. As a motherboard vendor with eco-awareness, ASRock is the pioneer to develop "EuP Ready" motherboards based on the great efforts of our exceptional hardware design.

According to Intel, the EuP ready power supply must meet the standard of 5v standby power efficiency is higher than 50% under 100 mA current consumption. For EuP ready power supply selection, please check with the power supply manufacturer for more details.
## ASRock, Worldwide First EuP Ready Motherboard Manufacturer!

ASRock hereby proudly announced that we are the Worldwide First motherboard manufacturer to release "EuP Ready" motherboard to the market! With ASRock "EuP Ready" motherboard, you are confident to setup a system to pass the EuP standard.

## P55 Deluxe and P55 Extreme, Worldwide First Motherboards that meet EuP 2.0 standard!

To compare with EuP, EuP 2.0 is stricter. According to EuP 2.0 standard, the total AC power consumption of the completed system shall be under 0.5W in off mode.

Today, we proudly announce that ASRock P55 Deluxe and P55 Extreme are the worldwide first motherboards that meet EuP 2.0 standard!

ASRock users are able to take full advantages of our Blu-ray Audio motherboards. Choose ASRock, choose Pure HD audio!

## Why ASRock?

**With ASRock Premium Blu-ray Audio**

Blu-ray Audio Source (24-bit/192 kHz) → 24-bit/192 kHz → Content Protection Supported → 24-bit/192 kHz → High SNR DAC → 24-bit/192 kHz → Premium Blu-ray Audio Quality

**Others**

Blu-ray Audio Source (24-bit/192 kHz) → 24-bit/192 kHz → Without Content Protection Supported → 16-bit/48 kHz → Low SNR DAC → Lossy 16-bit/48 kHz → Poor Audio Quality

\* SNR: Signal-to-Noise Ratio.
