

## Technical Reference - Q&A

1. Q: I have 939Dual-SATA2 / 939Dual-VSTA / 939A8X-M / K8A8X-M / K8Upgrade-1689/K8Combo-Z motherboard. When using Nvidia 7600GS/6600LE/6800GS/7800GS “AGP” card, I am not able to install the VGA card driver. How can I solve this?

**A:** This problem will occur on some AGP cards which does not use native AGP chip, but use native PCI-E chip with an “PCI-E to AGP Bridge” to become AGP interface.

Please set “AGP P2P Deep Fifo” to [Enable] in the BIOS. (Advanced>Chipset Settings>AGP P2P Deep Fifo)

It may need to upgrade the BIOS for this option:

Model	BIOS version
939Dual-SATA2	P1.60 or later
939A8X-M	P2.10 or later
K8A8X-M	P2.10 or later
K8Upgrade-1689	P2.40 or later
K8Combo-Z	P2.70 or later
